in want owing to illness or misfortune. Livestock, slaves, houses, and cultivated lands were the only forms of property that were actually inherited. The practice of burning a dead person's private property, consisting of clothing, tools, weapons, and ceremonial objects, over the person's grave solved the problem of their disposal. Even the houses were sometimes burnt, although the general practice was to change the doorway so that the ghost of the deceased could not find its way back.

ORGANIZATION OF LABOR

It appears, from what the Terena say, that the household was the primary economic unit. Both the men and women of the household, with whatever slaves they might have possessed, participated in agricultural labor. The men performed the heavy work of clearing and hoeing the ground, while the women and older children assisted in planting, weeding, and harvesting. The preparation of food, cooking, spinning and weaving, and pottery making were the activities of the women. Men's work consisted of hunting, fishing, tool making, preparation of skins, basket making, and warfare. Both sexes participated in collecting wild plant foods.

The men of the village would participate in a communal hunt on horseback if such large action was deemed advisable. If land was difficult to clear, several closely related households would assist one another in the work of clearing. Kinsmen, even when dwelling in different households, would assist each other in economic activities.

PRESENT-DAY ECONOMY OF THE TERENA

GENERAL DESCRIPTION

The migration of the Terena into their present location in Brazilian territory was followed by many changes in their economy. Here they found a new physical and social environment. Southern Mato Grosso was already under effective Brazilian control. Brazilian cattlemen were pushing westward, seeking land and labor for their new enterprises. The old free life of cultivation, hunting, fishing, and raiding came to an end—the Terena had to settle down. On the lands allotted to them, they began to cultivate plots of manioc, maize, sugarcane, cotton, and other crops

3. Endogamy of the Moieties and of the Strata

The aboriginal Terena social system did not permit marriage outside of the immediate social stratum or moiety. A Naati, for example, could marry only with another Naati, and only if the other Naati belonged to the same moiety. Thus, if he were a Sukirikionó, he could marry only a Sukirikionó girl. This was also true among the Waheré-Txané, who represented the immediately inferior class. But, while these also were divided into two moieties, Xumonó and Sukirikionó, the Kauti —comprising the lowest stratum in the Terena system— present no such division. This stems from the fact that they belonged to tribal groups of different cultures and are here separated from the others by an *ethnic*, rather than a *social* line, as explained in Section 1. With both classes and moieties endogamous, there is no problem of a genealogical order, since the child naturally belongs in the group common to both parents (see Figure II). With the change that has come about in the Terena communities, however, marriages have been taking place between members of opposing moieties and strata. Under ths circumstances the children receibed the stratum and moiety of their father. This has been carried to the point at which the social group has become agamic and patrilinear inheritance has been institutionalized.

The persistence until the present of the moiety divisions in Terena society (although they are tending currently to disappear), can be attributed to their ceremonial functions; whereas the strata having no such formalized activity, whether solemn or sportive, have been forgotten by the individuals of the community, except by the very old people, and especially the Naati, as we shall see. Still, when a person was questioned about the stratum to which he belonged he would try to remember if his father was Naati or Waheré (we did not encounter descendants of the Kauti). This demonstrates the way in which descent had come to be reckoned in the paternal line except that in case of intertribal or interracial marriage in which the father was not a Terena, the offspring would follow the maternal line. This last occurred when the offspring maintained their residence in the village, and it became convenient for them to identify themselves, and be identified, as Terena.

If we take as our example the village of Cachoeirinha, which presents the least acculturated characteristics (R. C. Oliveira, 1958b : 2), we note that of a total of 208 couples, 78 (37.5 %) could not supply us with this information. With regard to stratum membership, the ratio would be even greater in the direction of those who did not know their own status. There are villages that present even higher ratios,

/89 cont./

582 Marriage. They do not marry relatives, respecting blood. They customarily marry very young, at whatever age, not
881 considering physical development. At the appearance of menstruation, they hold great fiestas, accompanied by drunken-
[352] ness. They seat the young Indian girl in a highly adorned
[302] hammock, almost totally naked; they cover the young girl only with a tanga or julata, painting her body with several
[534] colors. Above her head they hang a bell, which is rung every
[402] minute or so by an elderly female relative; to the right and
[285] left of the girl sit her parents; the other relatives dance and
575 sing around the girl, who fasts the entire day. Polygamy is permitted among these Indians, there being some who have five, eight, and even more wives, and this depends on the
[568] number of sisters that the first wife has. They get married with considerable facility, breaking it off in the same way
595 and then marrying other women. They only have a fiesta at
527 the first marriage; for this the couple gather together the relatives of both contracting parties, inviting them all to a feast and drinks, a fiesta which ends with songs and dances, and lasts two or three days.

764 Death. When an Indian dies all weep, without any dis-
768 tinction of blood relationship. They customarily bury the dead man with everything that he owned in life, and what they cannot bury they divide among themselves; the animals that were owned by the deceased are exchanged for drinks; at the end they set fire to the house where he lived, and their weeping ends only after the complete disappearance of the goods left by the deceased.

765 The relatives observe mourning in the following way: they
[304] cut off their hair, some pluck out their eyelashes and scratch their faces, with the result that they disfigure themselves completely; this mourning is kept up from five to seven moons.
766 When a cacique dies they also bury him with everything he
622

/89 cont./
766 622 428 owned, with the exception of his vesture, which is inherited by his son, who carries on in power. /90/

Over the cacique's grave they build a small rancho of palm leaves, as a mark of distinction.

622 852 Cóchómonety or Cacique. The power of the cacique falls from fathers to sons. When the first son or daughter of the cacique is born, the latter, a few moments later, breathes into the mouth of the newborn, which signifies that at the age of 15, approximately, he will receive power and will be ordained to caciqueship, following his father in power as soon as the 622 latter dies. When the heirs reach the age of 15, the cacique 527 holds a big fiesta, for this calling together all the caciques 628 of the other aldeas. Dressed in a simple julata and with his 302 entire body painted in divers colors, the boy being honored is surrounded by all the invited caciques, who form a closed circle and go around and around the young man, singing for a period of two to three hours.

When this ceremony has ended they go on to eat and drink and the fiesta lasts from two to four days, that is, until the food and drinks are exhausted.

82 905 Astronomy. Each new moon is a month and 14 moons are a year. The sun is called paphúyty; the moon calipahú-quethy; the month paphuyty; the stars perphaty; the sky pipháyty; the earth piphéytó.

361 162 114 103 342 Aldeas. In the municipio of Miranda there exist approximately from 12,000 to 14,000 Terena Indians and a large number of aldeas, among which I cite only those that I visited, the main ones being those called: Agachy, Boquehina, Marro, Marrinho, Ipeque, Santa Ana, and Caytapé. All the aldeas show the same type of construction, which is rustic, the houses or ranchos consisting of thin walls of bamboo with a roof of straw or palm leaves. One aldea differs from another only in the greater or lesser number of ranchos.

342 162 627 Agachy Aldea. This aldea has 26 ranchos, the largest being from 8 to 10 meters long by 3 to 5 meters wide; it is inhabited by 367 Indians.
